

On-line shopping websites

E-commerce and on-line shopping websites allow you to display and sell virtually any product, safely and securely. A well constructed on-line store will improve sales and assist in building your customer base. Virtuemart™ is a powerful e-commerce component designed especially for Joomla. Once the component is installed in your website, then it is simply a matter of configuring the payment gateway and populating the store with your products. Virtuemart™ allows the user to customise the look and feel of their store, upload images, descriptions and pricing. The functionality and advanced design of the component provides fully customisable templates, so your store pages will fit the actual layout and design of the parent site. Virtuemart™ even allows you to sell downloadable files such as music, video, documentation, images, or virtually any digital file. If you have been considering an on-line shop for your business, call Queensland City Media to get started...
